

PROFILE DESIGNS

TRIPLE RAIL MARKER

This variation of an industry standard offers a flat front and center rib on the back. The rib is wider for increased strength and allows for an easier application of decals or reflective sheeting to the back side.

UTILIMARK

The Utilimark design is the most popular because it offers easy installation of decals or sheeting on both sides as well as a thicker middle section allowing for greater strength when driving into hard soils.

DOUBLE FLAT MARKER

With side rails to protect the decal or sheeting, this double sided flat marker is flexible and used across the country to mark hiking trails.
